Base Nutrients	BlueMax Part A	2.5	5	8	10	10	9	8	8	8	8	8	6
	BlueMax Part B	2.5	5	8	10	10	10	12	12	15	15	15	15
Health	Vita Blue												
Vigor	Liquid Seaweed												
Strength	Gold Shield												
Flower Formation	Early Bloomer												
Bud Weight	Liquid Blue												
Nutrient Uptake	Root Magic												

Feeding Tips:

- Never mix pure concentrations of any nutrient, always add them to water first.
- If growing in a soil-less garden such as coco or hydroponics, adjust and maintain the pH of the nutrient solution between 5.5 and 6.2.
- Plants grown in soil should have a pH between 6.2 and 7.0.
- Change the nutrient solution in your reservoir every 7 - 10 days.
- Keep nutrient solution aerated.
- Keep the temperature of the nutrient solution in your reservoir between 65 and 75°F.
- Maintain the Relative Humidity between 40 and 60%.
- Flush your system regularly with clean water to avoid nutrient build up.
- Maintain the temperature in your grow room between 60 and 84°F.
- Feed plants in soil up to twice a week. Large plants (particularly large outdoor plants) may require feeding with every watering.
